

ABSTRACT

An acrylic ester compound represented by the general formula

(1):

5 wherein, R₁ and R₂ represent independently a hydrogen atom, an
alkyl group which may have a substituent, an aromatic alkyl group
which may have a substituent or an aromatic residue which may
have a substituent, respectively; R₃ represents a hydrogen atom
10 or an alkyl group; A represents a divalent organic group; and
X represents a sulfur atom or an oxygen atom; provided that when
X is an oxygen atom, R₁ represents an aromatic residue that may
have a substituent, a polymerizable composition comprising the
compound, and a cured article and optical components obtained
15 by polymerizing the polymerizable composition.
